PROFESSIONNAL PROFILE

Junior Python Developer with a DEC in Web, Mobile, and Artificial Intelligence Programming and hands-on experience gained through a professional internship, I specialize in building scalable, high-performance applications by integrating frontend, backend, and database technologies. Proactive, adaptable, and results-driven, I am eager to contribute to innovative teams and deliver impactful technology solutions.

SKILLS

Professional:

- Highly organized and detail-oriented
- Strong prioritization skills
- Deadline-driven
- Effective Communication
- Effective team collaboration
- Fast learner

Technical:

Languages & Frameworks: Python (Django, Flask, FastAPI, Streamlit), JavaScript/TypeScript (Node.js, React, Express, EJS), C# (ASP.NET, LINQ, ADO.NET, Entity Framework), PHP (Laravel, Symfony), Java, Kotlin, HTML/CSS (Bootstrap)

Databases: MySQL, SQL Server, SQLite, MongoDB, Firebase, Supabase

Cloud and Tools: Google Cloud Run, Render, Vercel, Docker, Git & GitHub,

Practices: Agile/Scrum (sprint planning, daily standups, retrospectives, backlog refinement), RESTful API design, automated testing & debugging, code reviews

PROFESSIONNAL/ACADEMIC EXPERIENCES

September – November 2025 Fullstack Developer – Win Technologies

- Used python to design and implement two APIs with FAST API that were used in the backend of insect identification mobile app.
- Integrated Claude and Gemini in the backend of the mobile application to enhance its performance.
- Used google cloud run with Docker to deploy the Fast API servers.
- Deployed and managed Android/iOS builds through Play Store and App Store internal/beta testing tracks, validating functionality and gathering feedback prior to release.
- Developed responsive and dynamic frontend interfaces using TypeScript.
- Collaborated within an Agile/Scrum team environment, contributing to sprint planning, development, and timely delivery of project milestones.
- Participated in debugging, testing, and optimizing application performance.

Academic Accomplishments

Python & AI

- Created a signature file containing the facial characteristics of classmates in order to use face recognition.
- Built a website that uses face recognition for authentication.
- Trained Classification and Regression models to make predictions. A classification model trained on a kaggle dataset to predict diabetes on patients.
- Trained a model to find similar images within a dataset based on the user's entry image.
- Used an open source LLM to implement the RAG concept, in order to enrich the models response on a given topic. Reduced hallucinations by demanding the model to cite sources when giving responses.

Mobile and Web Development (Android)

- Built Android applications using Java and Kotlin, including e-commerce and activity management apps.
- Integrated local databases using SQLiteOpenHelper.
- Implemented interactive features using device sensors and dynamic UI components.
- Developed e-commerce platforms with shopping cart and payment integration (PHP, ASP.NET MVC, Entity Framework).
- Developed responsive web applications using HTML, CSS, JavaScript, Bootstrap, and React.
- Designed and implemented RESTful APIs using Node.js, Express, FastAPI, and integrated MongoDB and SQL databases.
- Built a full-stack streaming platform consuming a Node.js API with MongoDB.

CERTIFICATIONS

- Python Django for Beginners (by Edureka on Coursera) | Completed
- Git, Docker & CI/CD: DevOps Foundations for Data Engineers (by Edureka on Coursera) | 70% complete
- Automation and Scripting with Python (by Microsoft on Coursera) | 50% complete

EDUCATION

01/2024 – 02/2026 **DEC:** Web, Mobile and Artificial Intelligence Programming - **Teccart Institute**

09/2019 – 08/2022 **Professional Bachelor Degree:** Logistics and Transport - **SIANTOU Higher Institute**
